

## NUMERICAL METHODS

SH 553

Lecture : 3

Tutorial : 1

Practical : 3

Year : II

Part : II

### Course Objective:

To introduce numerical methods used for the solution of engineering problems. The course emphasizes algorithm development and programming and application to realistic engineering problems.

### 1. Introduction, Approximation and Errors of Computation (4 hours)

- 1.1. Introduction, Importance of Numerical Methods
- 1.2. Approximation and Errors in computation
- 1.3. Taylor’s series
- 1.4. Newton’s Finite differences (Forward, Backward, Central Difference, Divided Difference)
- 1.5. Difference operators, shift operators, differential operators
- 1.6. Uses and Importance of Computer programming in Numerical Methods.

### 2. Solutions of Non-linear Equations (5 hours)

- 2.1. Bisection Method
- 2.2. Newton Raphson method (two equation solution)
- 2.3. Regula-Falsi Method, Secant method
- 2.4. Fixed point iteration method
- 2.5. Rate of convergence and comparisons of these Methods

### 3. Solution of System of Linear Algebraic Equations (8 hours)

- 3.1. Gauss elimination method with pivoting strategies
- 3.2. Gauss-Jordan method
- 3.3. LU Factorization
- 3.4. Iterative methods (Jacobi method, Gauss-Seidel method)
- 3.5. Eigen value and Eigen vector using Power method

### 4. Interpolation (8 hours)

- 4.1. Newton’s Interpolation (Forward, Backward)
- 4.2. Central difference interpolation: Stirling’s Formula, Bessel’s Formula
- 4.3. Lagrange interpolation
- 4.4. Least square method of fitting linear and nonlinear curve for discrete data and continuous function
- 4.5. Spline Interpolation (Cubic Spline)

**5. Numerical Differentiation and Integration**

**(6 hours)**

- 5.1. Numerical Differentiation formulae
- 5.2. Maxima and minima
- 5.3. Newton-Cote general quadrature formula
- 5.4. Trapezoidal, Simpson’s 1/3, 3/8 rule
- 5.5. Romberg integration
- 5.6. Gaussian integration (Gaussian – Legendre Formula 2 point and 3 point)

**6. Solution of Ordinary Differential Equations**

**(6 hours)**

- 6.1. Euler’s and modified Euler’s method
- 6.2. Runge Kutta methods for 1st and 2nd order ordinary differential equations
- 6.3. Solution of boundary value problem by finite difference method and shooting method.

**7. Numerical Solution of Partial Differential Equation**

**(8 hours)**

- 7.1. Classification of partial differential equation (Elliptic, parabolic, and Hyperbolic)
- 7.2. Solution of Laplace equation (Standard five point formula with iterative method)
- 7.3. Solution of Poisson equation (finite difference approximation)
- 7.4. Solution of Elliptic equation by Relaxation Method
- 7.5. Solution of one dimensional Heat equation by Schmidt method

**Practical:** Algorithm and program development in C programming language of following:

- 1. Generate difference table.
- 2. At least two from Bisection method, Newton Raphson method, Secant method
- 3. At least one from Gauss elimination method or Gauss Jordan method. Finding largest Eigen value and corresponding vector by Power method.
- 4. Lagrange interpolation. Curve fitting by Least square method.
- 5. Differentiation by Newton’s finite difference method. Integration using Simpson’s 3/8 rule
- 6. Solution of 1st order differential equation using RK-4 method
- 7. Partial differential equation (Laplace equation)
- 8. Numerical solutions using Matlab.

## **CURRICULUM – BACHELOR’S DEGREE IN COMPUTER ENGINEERING**

### **Evaluation Scheme**

There will be questions covering all the chapters in the syllabus. The evaluation scheme for the question will be as indicated in the table below:

<b>Chapter</b>	<b>Hours</b>	<b>Mark Distribution*</b>
1, 2	9	16
3	8	16
4	8	16
5	6	10
6	6	10
7	8	12
<b>Total</b>	<b>45</b>	<b>80</b>

\* There may be minor deviation in marks distribution.
